

What is Dyscalculia?

Dyscalculia symptoms Include:

- Poor understanding of the signs +, -, ÷ and x, or may confuse these mathematical symbols.
- Difficulty with times tables.
- Poor mental arithmetic skills.

Dyscalculia is a specific learning disability which affects a person's calculating and concept understanding ability in mathematical area.

- May have trouble even with a calculator due to difficulties in the process of feeding in variables.
- May reverse or transpose numbers for example 63 for 36, or 785 for 875.
- Difficulty with conceptualizing time and judging the passing of time.

- May have a poor sense of direction (i.e., north, south, east, and west), potentially even with a compass.
- May have difficulty mentally estimating the measurement of an object or distance (e.g., whether something is 10 or 20 feet away).
